

EnerSure® Bus

Busway Power Meter

THE GOLD STANDARD FOR BUS TAP ENERGY MONITORING

Accurate:

The EnerSure® Bus is built on the world leading EnerSure® technology, which ensures true utility-grade accuracy. Each EnerSure® Bus unit can monitor either 4 or 8 circuits with its exclusive power meter on-a-chip technology. You get full utility-grade data for amps, volts, power factor, kW, and kWh.

Flexible:

The EnerSure® Bus unit supports standard CT sizes from 75 to 4000 amps. It also supports 120/208 and 277/480 busway systems. Up to thirty 4 circuit tap units and fifteen 8 circuit tap units can be connected in a single chain, or these can be mixed for a total of 120 circuits.

Full Ethernet

EnerSure® Bus is the only product that provides all standard forms of data connectivity without the need for gateways or additional hardware. The open protocols allow EnerSure® Bus to be easily integrated into any monitoring and management system. Multiple sessions are supported for use with multiple software systems.

Data Logging and Event Logging

The 9 onboard data logs can record 120 data points each with intervals as fast as 30 seconds. Using a standard microSD card, users can record thousands of time-stamped data points. The data logs can be downloaded as a .CSV file or delivered using Modbus TCP and BACnet/IP protocols. The onboard event logs record alarm indications for sequence of events correlation.

EnerSure is covered under United States Patents 6,622,097, 7,039,532 and 7,263,450. Additional U.S. and foreign patents pending.
